SUBTEXT UNDER VIDEO

Operations • Content • AI Automation • Client Ops

Zee Rodriguez

Remote Operations & Multi-Skill Support Specialist

I'm not here to just check off a task list. I look at how a business actually runs, find the part that's slowing everyone down, and fix it at the root, whether that's a missing process, a messy workflow, content that needs a real strategy, or manual work that should've been automated months ago.

Ten-plus years across virtual assistance, operations, social media, real estate/STR management, and market research taught me this: most businesses don't need extra hands. They need someone who can see the whole operation and know exactly where to step in, including where AI can quietly take work off your plate.

FIVE SKILLS, ONE PERSON

Tell me what's slowing you down, and I'll tell you which version of me fixes it.

Social Media • Operations • Web Management • AI Automations • Executive & Transaction Support

| *A good system is invisible. You only notice it when it's missing.*

ROLE 01

Social Media Manager

I keep a brand visible, consistent, and worth stopping to look at.

WHAT I HANDLE

Content creation, graphic design, posting schedules, and day-to-day audience engagement.

WHERE I'VE MADE IMPACT

Kept multiple client brand voices distinct and on-schedule at once. Built a daily content pipeline that pulls from live news sources and hands over ready-to-review posts, cutting content prep time significantly.

BACKGROUND

Designed graphics and campaign creative for concurrent client accounts at a US media agency, each with its own visual identity and posting cadence.

TOOLS

Canva • Adobe Photoshop • WordPress/Elementor • Meta Business Suite • SEO Tools • Custom GPTs

ROLE 02

Operations Manager

I build the processes that keep a business steady, even on the days you're not watching.

WHAT I HANDLE

Workflow design, SOP documentation, and ongoing operational reporting.

WHERE I'VE MADE IMPACT

Documented repeatable SOPs that cut down miscommunication between teams. Automated reporting and follow-up work that used to eat hours of my week by hand, freeing that time for higher-priority tasks.

BACKGROUND

Tracked performance metrics and ran weekly pipeline reporting. Managed operations for a short-term rental portfolio spanning Canada and the US, overseeing listings, compliance, and vendor coordination.

TOOLS

Asana • ClickUp • Zapier • Google Workspace • Xero • QuickBooks

ROLE 03

Web Manager

I keep the digital front door working, updated, and easy for your customers to move through.

WHAT I HANDLE

WordPress/Elementor site updates, content edits, page maintenance, and basic troubleshooting.

WHERE I'VE MADE IMPACT

Kept client websites current and functional without needing a developer on standby for routine updates.

BACKGROUND

Maintained and updated client websites and kept property management tools like PropertyMe current alongside day-to-day site work.

TOOLS

WordPress • Elementor • Google Workspace

ROLE 04

AI Automation Specialist

I build the tools that take repetitive work off your plate, permanently.

WHAT I HANDLE

Custom GPT builds, automated workflows, and AI-assisted content or reporting pipelines.

WHERE I'VE MADE IMPACT

Built custom GPTs to take on recurring EA work like scheduling logic, follow-up drafts, and report compiling. Set up a Zapier-based content pipeline that pulls from live news sources daily and now runs with minimal hands-on oversight. Replaced hours of manual, repetitive work with automations that just run in the background.

BACKGROUND

Spent years doing the exact manual work these tools now handle, which is why the automations I build actually fit how the work really gets done, not just how it looks on paper.

TOOLS

Custom GPTs • Claude • ChatGPT • Zapier • Dropbox Sign

ROLE 05

Executive Assistant & Transaction Coordinator

I catch the details before they turn into problems, from first email to closing.

WHAT I HANDLE

Calendar management, end-to-end transaction coordination, compliance and MLS input, and general executive support.

WHERE I'VE MADE IMPACT

Owned contract-to-close workflows start to finish, prepared offer paperwork, and tracked commission reporting. Managed scheduling, communications, and program logistics for a relational leadership coach.

BACKGROUND

Handled listings and timelines end-to-end, including MLS input, listing activation, and marketing materials for each property. Earlier career work included public sector and nonprofit program coordination.

TOOLS

Acuity Scheduling • Google Workspace • Microsoft Office • MLS • Square • CRM Platforms

See the work, not just the claims

Real systems, real content, real workflows, and a look at what goes on behind each one.

SUGGESTED PROOF PIECES TO FEATURE

- 1. Custom Website for Coaches**
A tailored WordPress/Elementor site built for a coaching business.
- 2. Reels & Videos for Content**
Short-form video content, edited and produced for social platforms.
- 3. Team SOP from Scratch**
A full SOP system, built from the ground up for a growing team.
- 4. Course Set-Up & Community Management**
Full course build-out, plus ongoing community moderation and engagement.
- 6. Social Media Marketing Management**
End-to-end social strategy, content, and scheduling, fully managed.
- 7. YouTube Management**
Channel upkeep, uploads, and content organization, handled start to finish.
- 8. Full-Campaign Listing Kit**
A complete marketing package built for a single property listing.
- 9. Book**
A published book on creating your narrative and achieving financial freedom.
- 10. Automations from Various Clients**
A sampler of automation builds delivered across different client accounts.
- 11. Podcast Editing & Repurposing**
Podcast episodes edited and repurposed into clips, posts, and show notes.
- 12. Webinar & Event Management**
End-to-end coordination for a live webinar or event, planning to execution.

How this actually works

No guessing, no scrambling. Here's the process from first message to a system that runs on its own.

Step	Focus
01	Figure Out the Real Problem — We talk through where things are breaking down, not just your task list.
02	Review What's Already There — I look at your current setup and flag what's costing you time or money, including anywhere AI could take over.
03	Build It, Deliver It — Systems, content, automations, or support go live, built around how you actually operate.
04	Hand It Off & Scale — With the workflow running on its own, we shift focus to growth instead of maintenance.

Got a bottleneck you're tired of managing? Let's talk.

Notes for You, Zee

- Split "Web & Automation" into two separate roles since AI Automations is strong enough to stand on its own.
- All copy is original wording, no phrasing borrowed from any reference site.
- Web Manager role is framed as site maintenance (WordPress/Elementor), not custom development. Let me know if you want that pushed further.
- If you have specific automation examples (e.g., "cut report prep from 3 hours to 20 minutes"), those numbers would land hard in the AI Automation Specialist section — swap them in wherever you can.
